SINUS DISSECTION COURSE

June 18, 2022

BACKGROUND

12 million Americans suffer from chronic sinusitis. The primary surgical treatment for chronic sinus issues is endoscopic sinus surgery. This is one of the most common procedures performed by ENTs in the country. This course is designed to provide otolaryngologists with information and laboratory experience regarding advanced techniques and approaches in endoscopic sinus surgery. The content will include recent advances in endoscopic sinus surgery including orbital and skull base considerations. It will be a combined half day AM lecture followed by half day PM cadaveric head dissection in the SPARTA lab. The presenters are faculty of LSUHS as well as outside speakers.

OBJECTIVES

1. Describe the latest advances in endoscopic sinus surgery.
2. Identify strategies of managing complicated frontal sinus disease.
3. Discuss optimization techniques of endoscopic sinus surgery.
